Practical - 05

Aim: 1) Write a Java application to demonstrate servlet cookie class  
2) Write a HTML code to design a login page and verify the login details using servlet code

Writeups -

1) About Cookie Class  
Cookies are text files stored on the client computer and they are kept for various information backing purpose. Java's servlet HTTP cookie class provides the functionality of using cookies. It provides a lot of useful methods for cookies. Cookies are passed from server to client and back again. In the HTTP headers of request and response, cookies can be used by a server to indicate session IDs, shopping cart contents, login credentials, user preference etc.

2) getParameter() -  
The functionality of the getParameter() method in getting data, especially from data, from a client HTML page to a JSP page is dealt with here. The request.getParameter() is being used here to retrieve from data from client side.
